

Integrasys is an innovative company since 1990, with offices in Madrid, Seville and Washington. We are leader in Monitoring and Control systems for Telecom and Satellite operators. Our products have been internationally recognized with 4 innovation awards in last 3 years, making the most innovative technology in VSAT and satellite space.

For our office in Seville, we are looking for a Development Engineer for a European R&D project that investigates robust and secured communications of drones and integration with Air Traffic Management systems. The desired requirements are:

- Engineering Degree (Preferred Junior Telecommunication Engineer)
- Software development - C/C++ and Java and SOA
- RF signal processing
- High level of English and willingness to travel
- Interest and motivation for communication technology
